Art Unit: 3671

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 3, 7, 9, 10, 14, 16-22 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,443,237 to Myers et al.

The Myers '237 patent discloses a deep tillage point structure adapted for connection to an upright shank (12) for forward movement through compacted soil. The structure comprises a main body (20) having a fore-and-aft extending leading nose (26) with a front surface that extends upwardly and rearwardly from a nose leading edge (28). A tapered top surface (50) extends rearwardly and upwardly from the front surface (see Fig. 3) and includes outwardly facing surfaces forming an apex (62). The surfaces cause a parting stress of the soil. See. Col. 2, lines 54-65.

Regarding claims 3, 7, 9, 10, 14, 16-22: A shin member (14) having a sharp edge extends vertically from an aft portion of the nose. The tillage point is constructed of austempered ductile iron (col. 3, line 15). The point further comprises wings (36) having a lift angle of 15 degrees (col. 4, line 19) and slope downwardly at an angle of less than 15 degrees (col. 4, lines 14-15). The wings having leading edges angled rearwardly at an acute angle (col. 4, lines 21-22). The leading edges of the wings enter the soil at a level just above the level of entry of the leading edge (28) (see Fig. 1). The aft edges of the wings terminate forward an aft edge of the shank.

Art Unit: 3671

The main body has a bifurcated attaching area (76, 80) adapted to receive a lower mounting end of the shank

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 2, 4, 5, 6, 8, 11-13, 15, 23, 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,443,237 to Myers et al.

The Myers '237 patent discloses the structure and arrangement of the tillage point, as stated in paragraph 2 above. While the Myers '237 patent does not disclose some particular angles between structural members or dimensions of structural members, providing a tillage point with these angles and dimensions would be obvious to one having ordinary skill in the art, since it has been held that where the general conditions of a claim are disclosed (such as the structure here) discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233 (CCPA 1955).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
